2. Citations and explanations (Rule 70.7)

The present invention relates a method for the purification of human interferon beta (INF-beta) consisting of effective washing stage in which 40-60% propylene glycol is used.

The following documents have been considered for the purpose of the report:

D1: US 5244655 (Sep 14, 1993)

D2: US 4483849 (Nov 20, 1984)

1. Novelty

D1 describes a method for purifying of human INF-beta by RP-HPLC. D2 disclose a process for stabilizing purified human INF using propylene glycol, and the use of Affi-Gel Blue in column of affinity chromatography stage. The select use of 40-60% propylene glycol in washing stage is not disclosed in any of the prior art. Therefore, the subject-matter of claims 1-5 is considered to be novel under PCT Article 33(2).

2. Inventive Step

The present invention especially provides a purifying process of human INF-beta containing washing stage by 40-60% propylene glycol. D1 and D2 disclose the purifying process consisting of special techniques: Affi-Gel Blue in column of affinity chromatography stage, RP-HPLC and propylene glycol. The present invention shows a difference in the select use of propylene glycol in washing stage. However, the present invention claimed in claims 1-5 is considered to be easily invented by a person skilled in the art with knowledge of the prior art documents D1 and D2, without the exercise of inventive skill. Therefore, the subject-matter of claims 1-5 is not considered to involve an inventive step under PCT Article 33(3).

3. Industrial Applicability

The subject-matter of claims 1-5 is considered to be industrially applicable under PCT Article 33(4).
